Government Solutions

neutrino8™

Good Governance

Townships, cities, municipalities, and regional local governments are always on a mission to redefine and enhance the way they interact with and provide services beneficial to their residents, constituents, and visitors — and almost always within strained budgets.

neutrino8™ solutions transform network access connectivity from a necessary utility into a revenue-generating asset, while reducing OPEX by up to 90% and CAPEX up to 30x. By eliminating the lock-in of expensive proprietary access networking vendors, and providing a platform for revenue-generating opportunities through premium services, neutrino8 enables governments to provide secure, reliable, and seamless access connectivity at a fraction of the cost with the foundation to materially accelerate a return for your investment.

Community Service Elevated

neutrino8 makes it economically feasible for local and regional governments to provide highly affordable, even free, access connectivity to their communities. Plus, you'll be able to generate insight and analytics in real-time such as identifying new marketing opportunities for revenue-generating services in support of local main street businesses. Analytics of user traffic flows, and location-based concentrations help with zoning, marketing, even strategy development to enhance the experiences of visitors or tourists as well as derivative economic benefits to the town.

Government Wins with neutrino8™

neutrino8 solutions, driven by their machine learning, AI-core, provide significant advantages, including:

- At dramatically lower OPEX and CAPEX, municipalities can offer constituents and visitors seamless, secure Wi-Fi connectivity and roaming across the city on the public Wi-Fi network

- City managers can access a wide variety of analytics throughout the city's network coverage area such as the public's real-time and historical traffic patterns and concentrations, including proactive and historical insight by hour of day, day of week, and more

- City managers can leverage premium services to send out promotions, coupons and messages to residents, visitors and tourists, promoting special events or attractions

- Local businesses can sponsor promotions, in turn offsetting the local government spend on this new public utility and accelerating return on investment for the municipality
