

# blazeHUB™

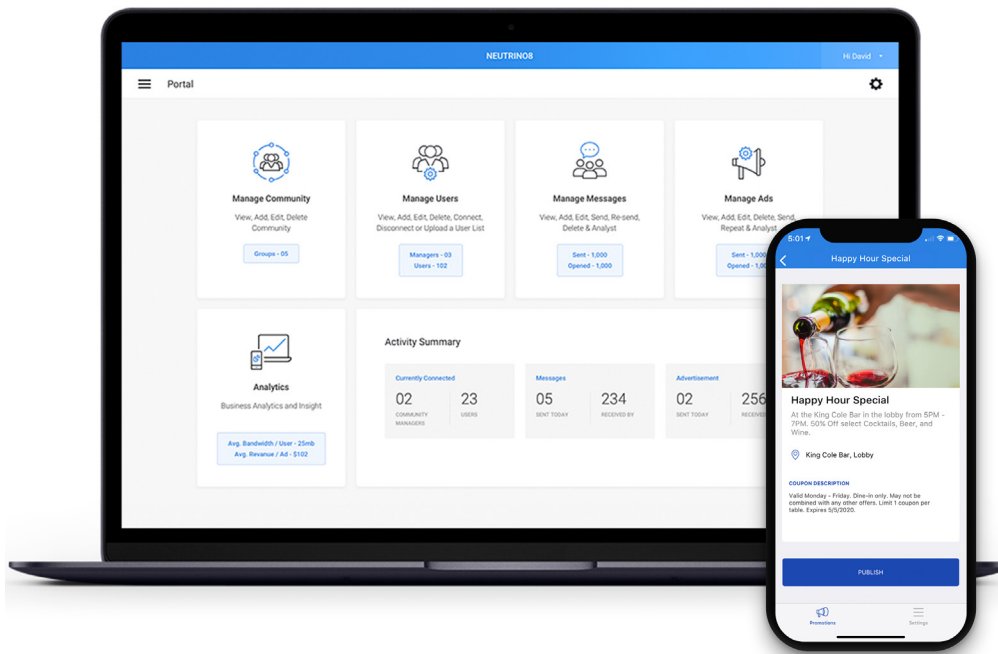

Marketplace for Revenue-Generating Services

## Transform Connectivity Cost Centers into Assets

The blazeHUB marketplace of premium services helps companies and other organizations generate revenue by monetizing their access connectivity infrastructure, while offsetting their access network acquisition and operating costs. Which are already dramatically reduced by leveraging neutrino8™'s AI-driven network orchestration solutions.

From dynamic creation and delivery of promotions and analytics to point-of-sale mobile apps and SDKs for third-party solution/partner development, blazeHub helps businesses and organizations transform connectivity from a cost center into an asset while delivering greater user benefits to customers and end users.

*Browse the marketplace of apps and services, or build customized solutions for your business*

## Key Benefits:

- Easily browse all available applications that integrate with neutrino8 solutions
- Integrate applications seamlessly with blazeAI automated access network orchestration
- No need to purchase proprietary hardware for additional solutions
