

blazeX™

A Multi-Function, Multi-Purpose,
End-User Communications App

Seamless, Secure, Automated, User Authentication and Connection

neutrino8™'s blazeX is a multi-function, multi-purpose mobile app. blazeX enables seamless, secure, dynamic user authentication and automated Wi-Fi network association. It is designed to also perform as a self-provisioning, guided mobile onboarding app for non-technical users to help them set up, provision and enable the wireless network in their home or small business.

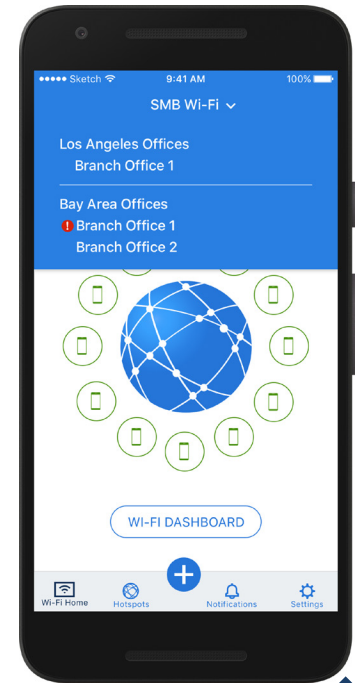

Enterprises and communication service providers can leverage neutrino8's blazeX as an end-user communications app, or as an SDK incorporating its functionality into their own apps. This provides organizations with rich, real-time insight, and historical and predictive data analytics to help optimize their wireless access network investment and the user's quality of experience. In addition, Communication Service Providers can leverage blazeX to significantly reduce inbound call center calls and resulting expensive technician truck rolls.

Key Benefits:

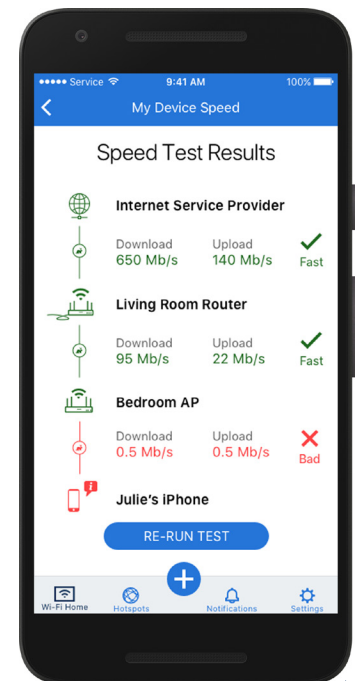

- Provides system-driven, secure and dynamic authentication and connection to the enterprise access network
- For SMB or residential networks, provides the end-user with easy, intuitive insight, and management and control of their Wi-Fi network
- Reduces human error and complexity of setting up new residential and SMB networks
- Delivers quality of connectivity experience
- Provides interactive real-time current and historical usage data analytics
- Can be used to effect role-based access, applying different privileges, messages, and notifications for staff, contractors, and guests, for example
- Reduces inbound call center calls and expensive truck rolls for Communications Service Providers

Key Features:

- Instant, secure, automatic, dynamic authentication and association to the network
- Available as an app, or incorporated as an SDK into existing apps
- Advanced historical, proactive and predictive analytics
- Provides SMB or residential users a broad overview and detailed insight into their access network health status
- Intuitive end-user drill down for greater insight and to optimize their SMB or home Wi-Fi experience
- Tightly-coupled to leverage premium services delivery
- Option for co-branding
- Notifications with AI-driven suggestions
- Innovative function for inviting friends and guest to connect without needing to reveal passwords
- GDPR-compliant

Interactive insight and user control of access network

See, understand, and troubleshoot any device status on the access network
