

Work From Home Solutions

The New Virtual Workplace: A Digital Transformation

The coronavirus pandemic has precipitated a seismic shift in the corporate workplace by suddenly forcing an unprecedented number of employees worldwide to work from home. For many enterprises however, though the pandemic may have served as an accelerant, the shift to more employees working from home (WFH) will remain permanent.

Driving this digital transformation of the workplace is the urgent need and opportunity to manage costs. CFOs, who are already under pressure to tighten budgets and manage expenses, want to seize and aggressively leverage this opportunity to reduce the cost of daily operations.

According to a new survey* from research firm Gartner, 74 percent of CFOs and business finance leaders expect some of their workforce who previously worked in company offices to remain permanent WFH employees, even after the pandemic subsides. CFOs surveyed expect from 10 percent to over 50 percent of their employees to stay remote.

The digital transformation of the corporate workplace on such a massive scale is not without challenges. Companies must ensure hundreds, or even hundreds of thousands of remote workers have secure access to the corporate network. At the same time, enterprises must maintain the same level of security and control they currently have. For companies to successfully navigate this digital transformation without forgoing the dramatic cost savings gained from doing so, an entirely new approach is required.

neutrino8: Driving Dramatic TCO Savings

AI-driven, virtualized, hardware-agnostic and Cloud-delivered, **neutrino8's uniquely innovative enterprise-class Work from Home Solution** delivers secure, automated wireless network orchestration anywhere. Companies can securely and reliably provide, and fully control, their WFH employee's connectivity to enterprise assets, all while reducing enterprise access networking OPEX by up to 90% and CAPEX up to 30x.

neutrino8's solutions dramatically cut an organization's wireless access networking TCO to a fraction of its existing costs. And, neutrino8's solutions deliver security, reliability, easy and inexpensive scalability, and anytime full control to support more remote WFH employees.

With neutrino8, the digital transformation of the workplace is not just possible, it's a competitive advantage.

Key Benefits:

- Architected to deliver up to 10x TCO savings
- Provides CFO/Finance and IT accurate anytime/real time fine-grain and aggregated analytics for access networking usage
- Seamless transition to secured WFH settings indistinguishable from the corporate office experience
- Built-in persistent VPN connections continuously secure employee's remote access
- Instantly, and automatically authenticate and connect authorized WFH employee work devices to enterprise networked assets and data
- Easy to deploy and use with zero touch provisioning — automatically pre-configured by IT for employees to plug into their existing home Wi-Fi networks and just go
- Always controlled by the corporation's central IT/network administrators
- Effortless scalability to provision additional remote WFH employees as needed
- Freedom from expensive hardware vendor lock-in

Key Features:

- AI automated, cloud-delivered virtualized hardware agnostic solution
- Seamless, single-pane-of-glass management portal and analytics dashboard for all APs in the corporate network — in remote WFH employee locations and optionally in the corporate office
- Seamlessly extends corporate use and security policies to the WFH remote access network:
 - Persistent VPN connection — secure routing of work traffic to maintain privacy and compliance
 - RADIUS/WPA2 enterprise functionality
- Seamless API integration between the neutrino8 orchestrated WFH secure access networks and any existing corporate network
